Items of Interest  
Week Ending September 10, 2004

Arkansas Nuclear One, Unit 2 - Issuance of Draft Supplemental Generic Environmental Impact Statement for License Renewal

On August 30, 2004, the NRC staff issued draft NUREG-1437, "Generic Environmental Impact Statement for License Renewal of Nuclear Plants, Supplement 19, Regarding Arkansas Nuclear One, Unit 2," for public comment. This supplemental environmental impact statement (SEIS) includes the staff's preliminary analysis that considers and weighs the environmental effects associated with the proposed license renewal, and mitigative measures available for reducing or avoiding adverse impacts. A 75-day public comment period is scheduled to begin on September 10, 2004. The staff has scheduled a public meeting on October 21, 2004, in Russellville, Arkansas, to present its analyses and to accept public comments on the draft SEIS.

Browns Ferry - Public Meeting to Discuss Unit 1 Recovery Plan

On September 9, 2004, NRC senior management and staff from both headquarters and Region II met with representatives from the Tennessee Valley Authority to discuss the status of Browns Ferry Unit 1 recovery efforts and potential issues concerning the restart process. Browns Ferry Unit 1 had been shutdown since 1985. It is undergoing major construction work to prepare for a projected restart in 2007.

Meeting with Nuclear Energy Institute (NEI) on the Early Site Permit (ESP) Program

On September 9, 2004, the staff met with NEI in a public meeting to discuss several aspects of the ESP program, including emergency planning, applicability of 10 CFR Part 21, "Reporting of Defects and Noncompliance," and inclusion of plant parameters. The staff stated that it plans to develop additional guidance on the "major features" option for emergency planning information to be provided at the ESP stage. The guidance will address whether and how determinations made at the ESP stage regarding major features are treated at the combined license stage in accordance with 10 CFR 52.39. The staff plans to inform NEI and the applicants of the guidance by a letter and may also revise applicable guidance documents in the future.

Week Ending September 10, 2004

Meeting with Xcel Energy on Pathfinder Decommissioning

On August 31, 2004, NRC staff met with Xcel Energy at its Pathfinder facility in Sioux Falls, South Dakota, to discuss its license amendment request to authorize decommissioning activities. This meeting, preceded by a tour of the facility, provided NRC staff with an opportunity to exchange information and address questions related to its ongoing review of the Pathfinder decommissioning plan. The meeting was open to the public.

The meeting focused on (1) informing the public that NRC has received a license amendment request to authorize decommissioning activities and a decommissioning plan from Xcel Energy; (2) describing NRC's decommissioning process and inspection program; (3) describing Xcel Energy's decommissioning plans and schedule; and (4) addressing questions and soliciting public comments on Xcel Energy's decommissioning plans. There were no public comments on the proposed decommissioning activities.

Meeting with Environmental Protection Agency (EPA) to Discuss the Use of Acute Exposure Guidelines Levels (AEGLs)

On September 8, 2004, staff from the Division of Fuel Cycle Safety and Safeguards (FCSS) met with EPA staff, at EPA's offices. The purpose of the meeting was to discuss the use of AEGLs by licensees/applicants in demonstrating compliance with the requirements for performing the Integrated Safety Analysis required by 10 CFR Part 70, "Domestic Licensing of Special Nuclear Material." The meeting was prompted by a member of the AEGL development committee who submitted, to NRC, several issues regarding how an applicant proposed to use AEGLs in its application to FCSS. During the meeting, FCSS staff discussed the performance requirements contained in 10 CFR 70.61, and the guidance contained in NUREG-1520, "Standard Review Plan for the Review of a License Application for a Fuel Cycle Facility," Chapter 3, Appendix A, "Example Procedure for Accident Sequence Evaluation," vis-a-vis using AEGLs.

As a result of the discussions, EPA staff indicated that the use of AEGLs, by NRC licensees/applicants, for setting chemical consequence thresholds in their Integrated Safety Assessment development for both workers and members of the public, is reasonable and consistent with AEGL recommendations.

Collaborative Research Program Review Meeting on Cable Diagnostics

On August 30-31, 2004, as part of the ongoing collaborative research program with the Federal Aviation Administration (FAA), Boeing, and Rockwell Scientific, Office of Nuclear Regulatory Research (RES) staff observed diagnostic tests on low-voltage instrumentation and control cables. The purpose of the tests was to evaluate the effectiveness of the broadband impedance spectroscopy (BBIS) method to detect and locate thermal hot-spots in installed cable systems in operating nuclear power plants. While the BBIS technique was developed by FAA/Boeing for aircraft wiring, the RES staff is evaluating the technology for its applicability to cables in nuclear plant environment. The preliminary evaluation indicates that the BBIS technique looks promising for assessing the integrity of installed cable systems. The BBIS technique is non-destructive, utilizes low-voltage signals, and has the capability to scan the entire length of the cable system. The staff plans to continue to collaborate with FAA/Boeing and to appropriately disseminate the research results to internal and external stakeholders. The outcome of the research results will be useful to the NRC staff in evaluating licensees' aging management programs for cables.

Commission Correspondence

1. Letter to Tom Ridge, Secretary, Department of Homeland Security, dated September 8, 2004, provides an update of actions the NRC has taken to continue enhancing security of nuclear facilities and radioactive materials.
2. Letter to Sandra Galef, New York State Assembly, dated September 2, 2004, responds to letter regarding the recent change in the NRC's policy on the availability of certain security information as initially reported by the media.

3. Letter to James H. Douglas, Governor of Vermont, dated September 1, 2004, responds to specific request pertaining to the NRC's engineering inspection currently being performed at the Vermont Yankee Nuclear Power Station.
4. Letters to Senator Jeffords, Senator Leahy, and Representative Sanders, dated September 1, 2004, responds to specific request pertaining to the NRC's engineering inspection currently being performed at the Vermont Yankee Nuclear Power Station.
5. Letter to Congressman Edward Markey, dated August 31, 2004, responds to questions concerning the three missing irradiated spent fuel rod segments at the Humboldt Bay Nuclear Power Station Unit 3.
6. Letter to Congress, dated August 31, 2004, provides the July 2004 report on the status of NRC's licensing and regulatory duties.
7. Letter to Congresswoman Nita Lowey, dated August 30, 2004, regarding Westchester County Legislator Michael Kaplowitz and his request for NRC to meet with the County Board's Environmental Committee.

#### Federal Register Notices Issued

1. Advisory Committee on Nuclear Waste Subcommittee Meeting on Planning and Procedures, notice of meeting (9/24/04).
2. Advisory Committee on Nuclear Waste, notice of 153<sup>rd</sup> meeting on September 22-23, 2004.
