Office of Nuclear Reactor Regulation (NRR)
Items of Interest
Week Ending October 29, 2010

Meeting with Institute of Electrical and Electronics Engineers (IEEE)

From Monday October 18 through 20, 2010, staff participated in the IEEE Insulated Conductors Committee meeting in Fountain Hills, Arizona. NRC staff participated in several working group sessions involving revisions to the IEEE Std. 400 series, which provide guidance for testing of electric power cables. The staff also provided a brief overview of the NRC's recent efforts associated with electric power cables at nuclear power plants.

Acceptance Of License Renewal Application For Davis-Besse Nuclear Power Station

On October 18, 2010, the NRC staff completed the acceptance review of the license renewal application for Davis-Besse Nuclear Power Station, Unit 1. The staff determined that the application contains sufficient information for docketing. On August 30, 2010, the staff received the license renewal application (LRA) from FirstEnergy Nuclear Operating Company, requesting the extension of the operating license for an additional 20 years beyond the current 40-year term. Davis-Besse Nuclear Power Station, Unit 1, is a pressurized-water reactor designed by Babcock and Wilcox with a current operating license that expires at midnight on April 22, 2017. The staff plans to hold public information sessions at Camp Perry, Ohio on November 4, 2010, to describe the license renewal process. Acceptance of the LRA, which is published in the *Federal Register*, begins a 60-day opportunity for members of the public to file a request for hearing and/or petition to intervene.

Turkey Point, Units 3&4, Extended Power Uprate Application

By application dated October 21, 2010, the licensee requested a 15% extended power uprate (EPU) for Turkey Point Units 3 and 4. The application includes a 1.7% measurement uncertainty recapture power uprate. The application requests NRC approval by December 30, 2011, to allow implementation coincident with the spring 2012 Unit 3 and fall 2012 Unit 4 refueling outages. NRC's standard review time for an EPU is 12 months after NRC's acceptance of the application. The NRC staff will be conducting an acceptance review of the application.

Staff Issues Hope Creek Generating Station And Salem Nuclear Generating Station, Units 1 And 2 License Renewal Draft Supplemental Generic Environmental Impact Statement (SEIS) For Public Comment

On October 21, 2010, the staff issued the draft of NUREG-1437, "Generic Environmental Impact Statement for License Renewal of Nuclear Plants, Supplement 45, Regarding Hope Creek Generating Station and Salem Nuclear Generating Station, Units 1 and 2," for public comment. This SEIS includes the staff's preliminary analysis that considers and weighs the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and mitigative measures available for reducing or avoiding adverse impacts. It also includes the staff's preliminary recommendation that the adverse environmental impacts of license renewal for Hope Creek Generating Station and Salem Nuclear Generating Station, Units 1 and 2, are

not so great that preserving the option of license renewal for energy-planning decision-makers would be unreasonable. The public comment period is scheduled to end on December 17, 2010. The staff has scheduled public meetings on November 17, 2010, near the plants to present its analyses and accept public comments on the draft SEIS.

Meeting with the Nuclear Energy Institute (NEI) Regarding Fire-Induced Circuit Failures

On October 27, 2010, the staff held a Category 2 public meeting with NEI representatives to discuss implementation issues relating to fire-induced circuit failures. NEI representatives presented specific implementation issues that they believed, if clarified, would improve industry stakeholders' ability to analyze fire-induced circuit failures. The NRC staff provided their views on these clarifications during the meeting.

Office of Nuclear Material Safety and Safeguards (NMSS)
Items of Interest
Week Ending October 29, 2010

International Atomic Energy Agency (IAEA) Follow-Up of Safety Evaluation During Operation Evaluation at Brazilian Uranium Fuel Fabrication Facility

On October 18 to 22, 2010, an International Atomic Energy Agency (IAEA) team of experts, including a staff member from NMSS, conducted a follow-up to a Safety Evaluation During Operation (SEDO) mission, which was conducted in April and May of 2007 at a uranium fuel fabrication facility operated by Industrias Nucleares Do Brasil (INB) in Resende, Brazil. The SEDO team had three other experts from Germany, Sweden and Romania. The team leader and deputy team leader were IAEA officials. On the day of the exit meeting, a draft report documenting the SEDO team's assessment of INB's completion of IAEA's safety recommendations, which were identified during the SEDO mission in 2007, was provided to INB. Since a significant percentage of recommendations still remain open, the IAEA indicated the need for a second follow-up mission.

Public Workshop on Development of Regulatory Framework for Spent Nuclear Fuel Reprocessing Facilities in Albuquerque, New Mexico

On October 19 to 20, 2010, NRC staff hosted a public workshop in Albuquerque, New Mexico to discuss issues related to the development of a regulatory framework for spent nuclear fuel reprocessing facilities. The purpose of the workshop was to solicit the views and perspectives of stakeholders regarding the technical and regulatory issues that NRC staff is addressing in the development of a reprocessing regulatory framework. The workshop discussions followed a roundtable discussion format, moderated by a professional facilitator, to promote dialogue and discussion among panelists. The invited panelists included NRC staff, citizen and environmental groups, nuclear industry representatives, and other Federal agencies.

Week Ending October 29, 2010

Public Workshop on Potential Changes to U.S. Nuclear Regulatory Commission's Radiation Protection Regulations

On October 25-27, 2010, NRC hosted a public meeting, in Silver Spring, Maryland, to solicit early stakeholder input on potential changes to the agency's radiation protection regulations and guidance in light of recommendations of the International Commission on Radiological Protection (2007). This meeting was in the format of a facilitated roundtable discussion and was the first in a series of three public meetings on this subject. Panel members and attendees included members of the nuclear power industry, and representatives from fuel cycle facilities, industrial radiography, industrial applications, source manufacturers, medical specialties, professional organizations, universities, laboratories, and the general public. The participants provided a wide variety of perspectives and viewpoints. NRC staff encouraged participants to submit written comments regarding this topic by January 31, 2011, as outlined in the September 27, 2010, *Federal Register* Notice related to this topic (75 FR 59160). The remaining workshops will be held in Los Angeles, California on November 3-4, 2010, and Houston, Texas, on November 8-9, 2010.

Office of Administration (ADM)
Items of Interest
Week Ending October 29, 2010

Anthony R. Pietrangelo on Behalf of the Nuclear Energy Institute; Receipt of Petition for Rulemaking (NRC-2010-0304, PRM-26-5)

On October 22, 2010, the NRC published for public comment a notice of receipt of a petition for rulemaking (75 FR 65249) dated September 3, 2010, which was filed with the NRC by Anthony R. Pietrangelo, on behalf of the Nuclear Energy Institute. The petitioner requests that the NRC amend its regulations regarding fitness for duty programs to refine existing requirements based on experience gained since the regulations were last amended in 2008.

Mark Edward Leyse; Mark Edward Leyse and Raymond Shadis, on Behalf of the New England Coalition; Petitions for Rulemaking (NRC-2009-0554, PRM-50-93, and PRM-50-95)

On October 27, 2010, the NRC published for public comment a notice of consolidation of petitions for rulemaking (PRM) (75 FR 66007). The PRMs to be consolidated are PRM-50-93 filed by Mark Edward Leyse on November 17, 2009, and PRM-50-95 filed on June 7, 2010, by Mark Edward Leyse and Raymond Shadis, on behalf of the New England Coalition. In PRM-50-95, the petitioners request that the NRC order Vermont Yankee Nuclear Power Station to lower the licensing basis peak cladding temperature in order to provide a necessary margin of safety in the event of a loss-of-coolant accident. The NRC is considering PRM-50-95 in conjunction with existing PRM-50-93 that the NRC is reviewing on the same issue and is re-opening the public comment period to consider the matter raised by PRM-50-95.

Office of Public Affairs (OPA)
Items of Interest
Week Ending October 29, 2010

OPA Received Significant Media Inquiries on the Following:

The decision by the Chairman to transition the Yucca Mountain licensing review work into “orderly closure” under the Commission’s FY11 budget guidance.

The Atomic Safety and Licensing Board panel’s ruling that rejects a contention from the New England Coalition regarding Entergy’s aging management program at Vermont Yankee nuclear power plant (Vermont).

An event notification at Peach Bottom nuclear power plant (Pennsylvania) involving a dry cask leaking a small amount of helium at the site.

Other Public Affairs Items

OPA supported a public meeting in Tennessee on the draft Environmental Assessment for the relicensing of Nuclear Fuel Services.
