Developing NOAA Tsunami Forecast

Tsunamicast – a forecast tool developed for NRC

Tsunami Propagation Database:
1725 unit sources for pre-computed tsunami events.

West Pacific

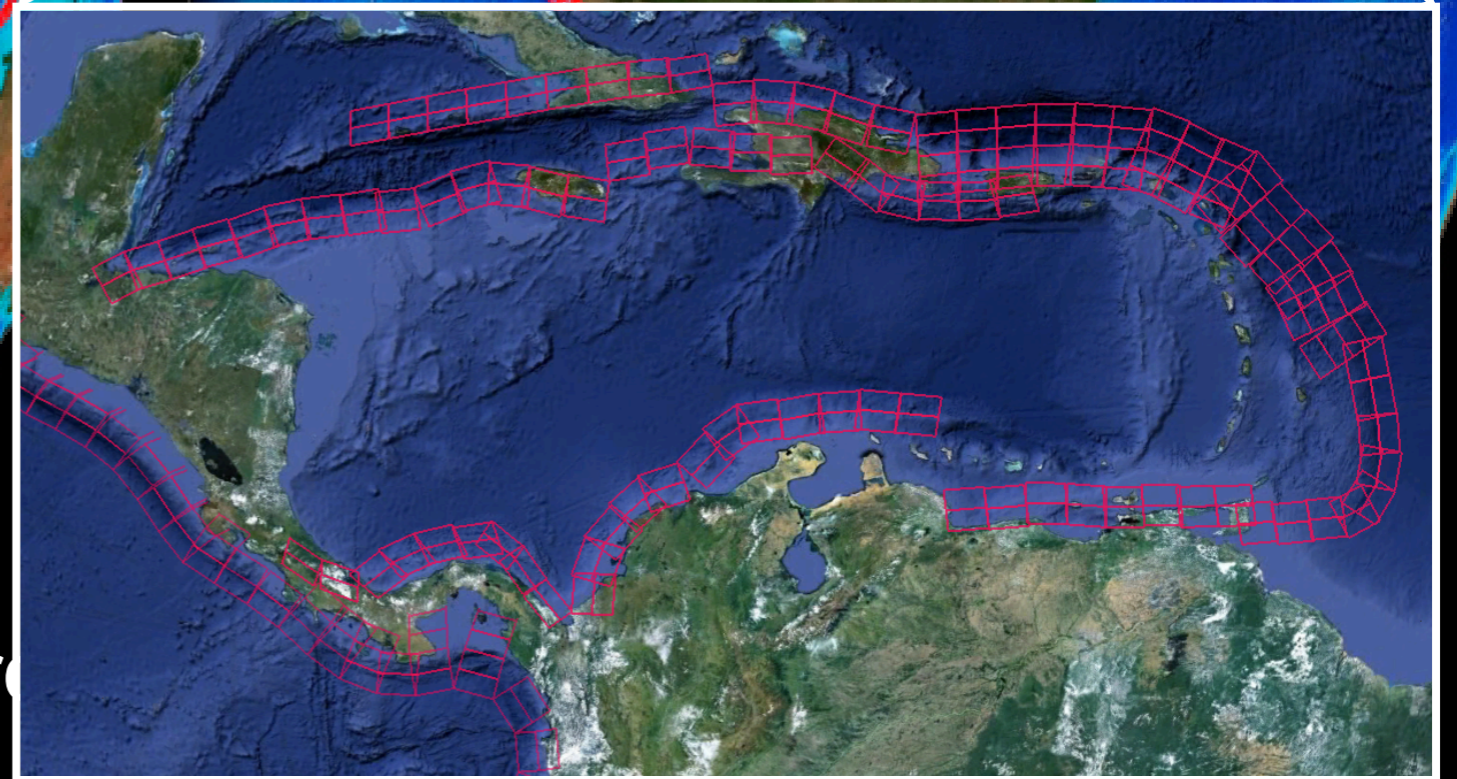

East Pacific

Indian
Ocean

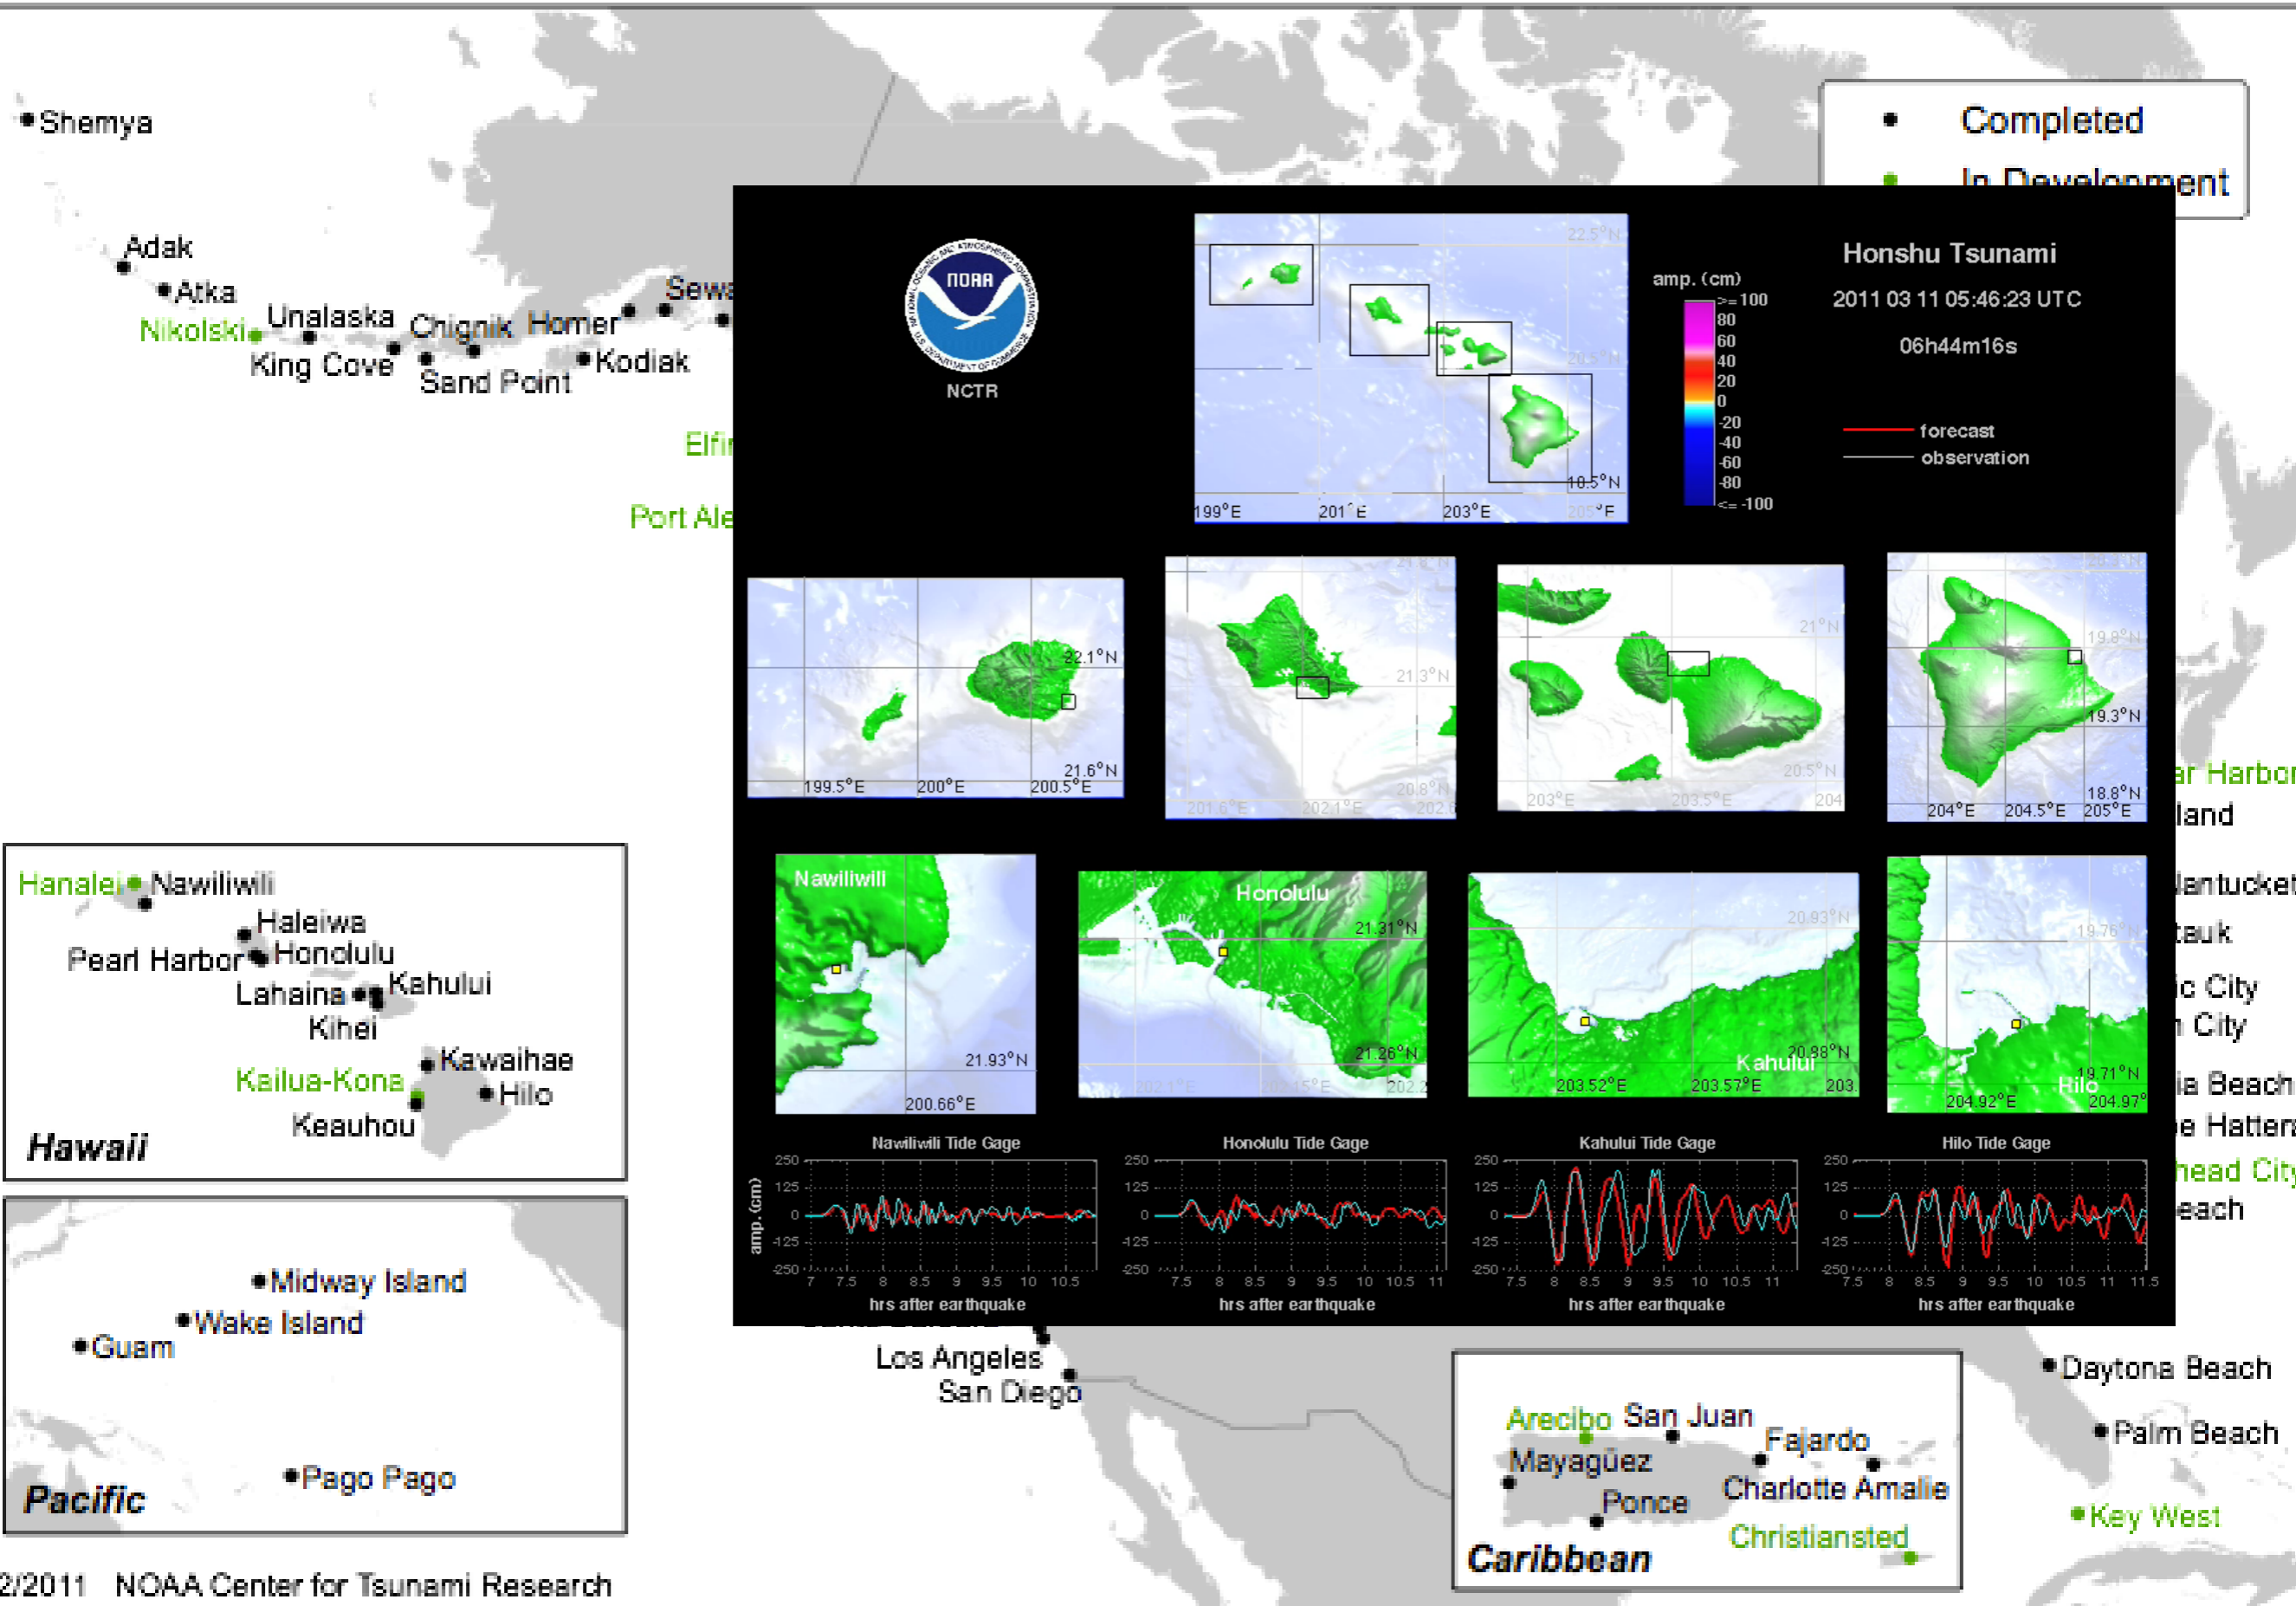

Atlantic
Ocean

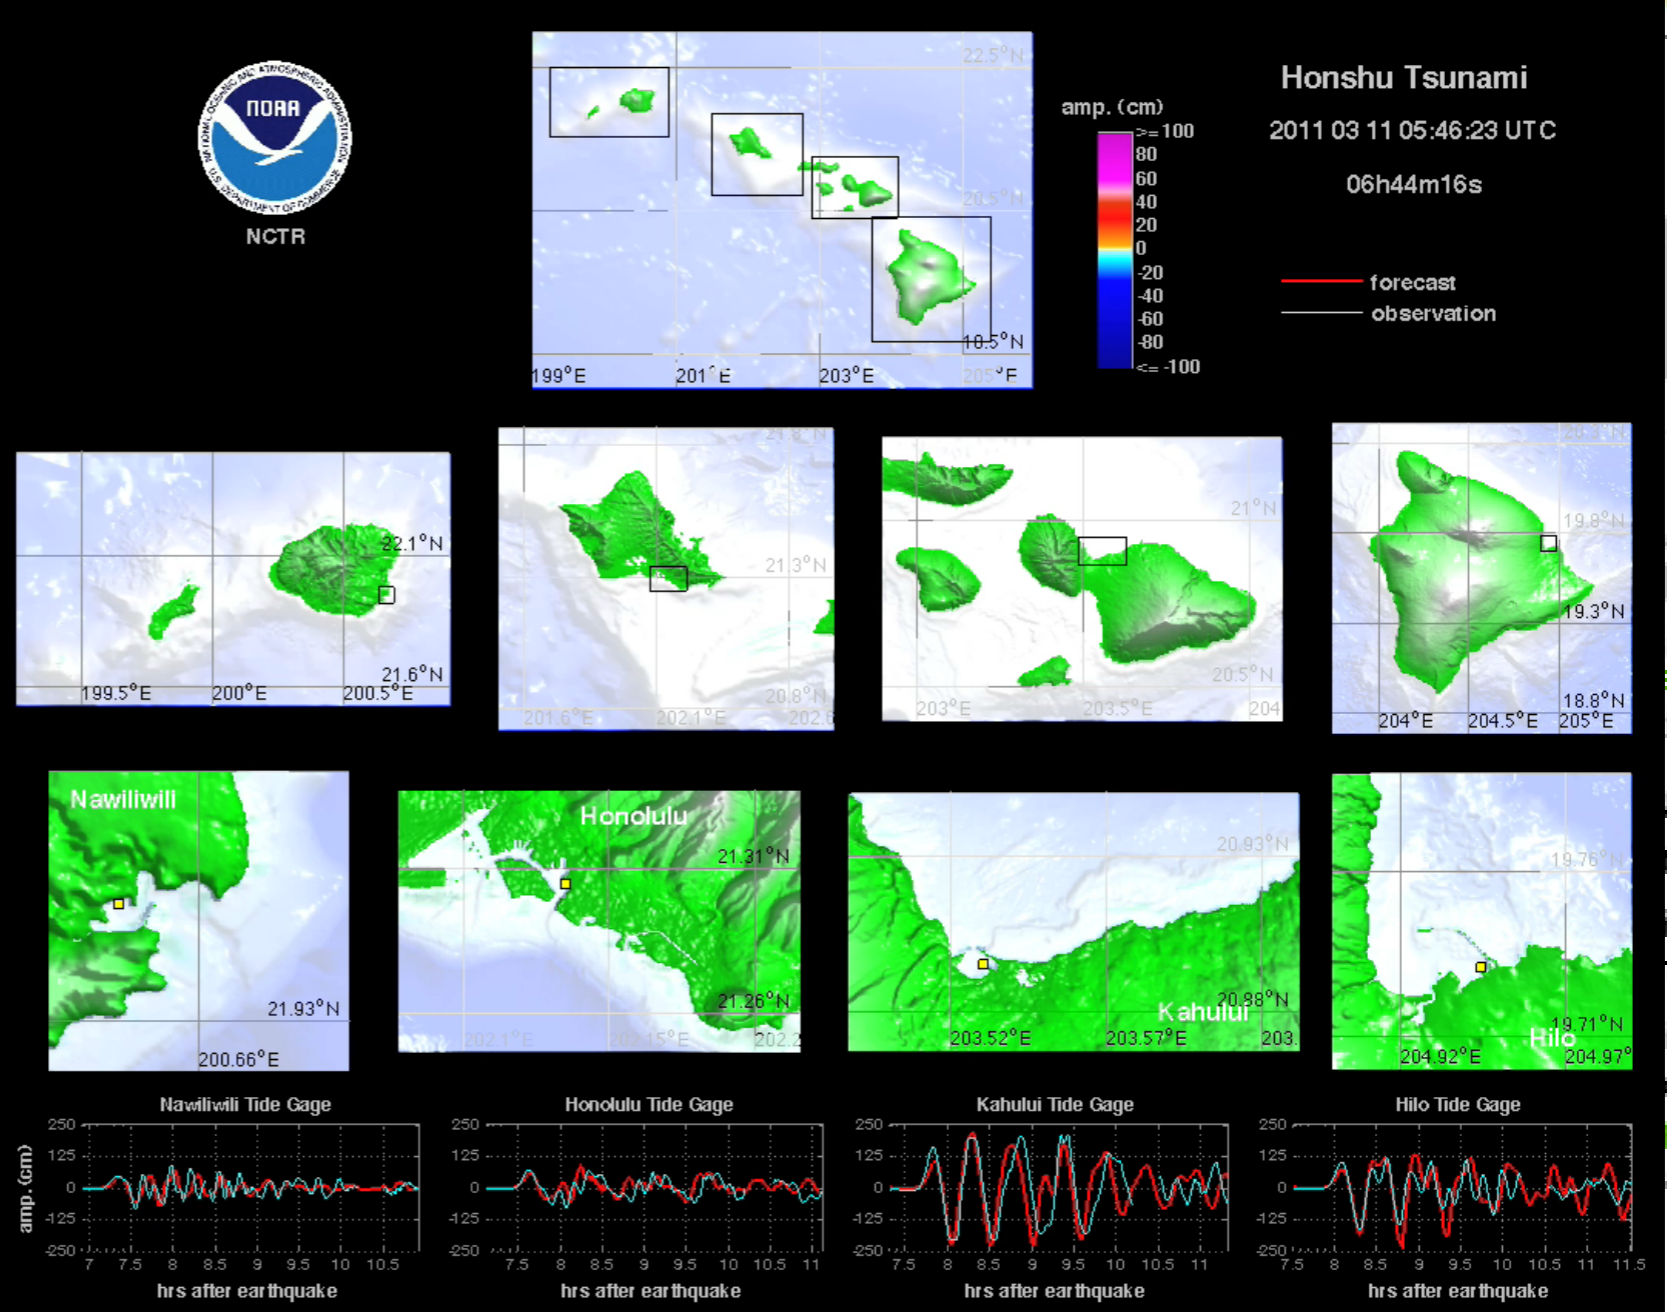

PMEL Tsunami Unit Source

- 100 km × 50 km
- Placed along subduction zones and known tsunamigenic faults
- Aligned to fit known fault geometries
- Computed using linear shallow-water equations
- Can be linearly combined for source magnitude > 7.5

NOAA Tsunami Forecast Models

● Completed
● In Development

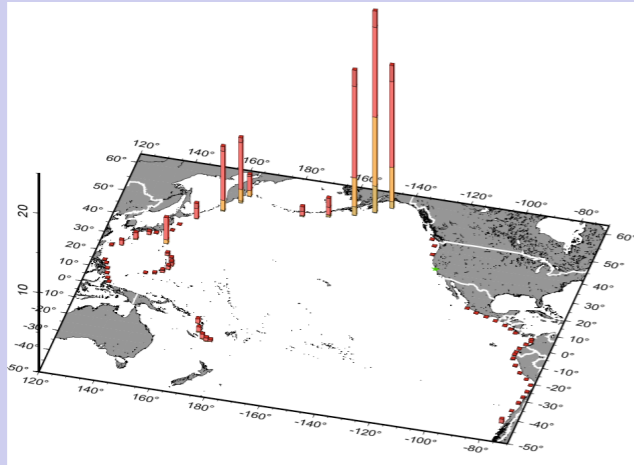

Tsunami Flooding Assessment Using Forecast Tools

PTHA tsunami hazard
maps

PMEL tsunami forecast
tools

- Source disaggregation and selection

Courtesy of Thio et al. (2010)

- Offshore tsunami height for an ARP level

Courtesy of Thio et al. (2010)

Reconstruct disaggregated scenarios using a combination of PMEL “unit tsunami sources”:

- source location
- magnitude
- rupture area
- slip

Tsunami inundation modeling for reconstructed sources

Tuning for PTHA tsunami height using unit tsunami sources

Derive probabilistic flooding hazard maps using an envelop of inundation lines obtained from above steps
