TRAINING: No.

REMARKS: IMC 0609 App F, "Fire Protection Significance Determination Process," has been revised to incorporate an expanded Phase 1. This was created in response to a large number of comments that were received from regional analysts via the ROP Feedback process and Risk Network initiative. Specific key improvements include: (a) inclusion of additional screening questions for each of the fire finding categories based on review of archived fire SDP items, fire data, and expertise that were not available at the previous release of Appendix F, (b) expansion of initial quantitative screening to include a non-suppression probability term, and (c) addition of an option to rely on licensees' fire PRA assessment of fire findings under appropriate oversight.

IMC 0609 App F, Att 1, "Fire Protection Significance Determination Process Worksheet," has been revised to add the qualitative screening questions and updated guidance needed for inspectors to complete the phase 1 screening process of fire protection related findings.

IP 65001.F, "Inspection of the ITAAC-Related Design and Fabrication Requirements," has been revised as a complete re-write to address current inspection program policies. Researched commitments for four years and found none.

DISTRIBUTION: Standard
