NRC Schedules Open House to Discuss Robinson Nuclear Plant 2015 Performance

The Nuclear Regulatory Commission staff has scheduled an open house for March 23 to discuss the agency's assessment of the Robinson nuclear plant during 2015.

The plant, operated by Duke Energy, is located near Hartsville, S.C., 26 miles northwest of Florence.

The open house, which will include informational posters, is scheduled from 5 p.m. to 6 p.m. at the Hartsville Public Library, 147 W. College Ave., in Hartsville.

NRC resident inspectors and other staff members will be available to answer questions on the safety performance and regulatory oversight of the Robinson plant, as well as highlights of NRC inspections.

“We invite the public to visit with us and find out what we're doing to ensure Robinson and other nuclear plants are operated safely,” said NRC Region II Administrator Cathy Haney. “These annual meetings offer an opportunity for everyone, and especially people who live near the plant, to learn about our inspection and oversight programs.”

The NRC's annual [assessment letter](#) to plant officials addressing 2015 Robinson plant performance will serve as the main focus of the open house, but NRC staff members will be available to answer other questions about the NRC's role at the plant.

The NRC review of the Robinson plant for 2015 concluded that the plant operated in a manner that preserved public health and safety and protected the environment. Because of that performance, it will continue to receive the detailed routine or baseline inspections this year that all nuclear power plants receive.

The NRC uses color-coded inspection findings and performance indicators to assess plant performance. The colors start with green, which has very low safety significance, and then progress to white, yellow or red, based on the significance of the issues. All inspection findings and performance indicators for Robinson were green in 2015.

[Current performance information](#), as well as more detailed information about NRC inspection and oversight, is available at www.nrc.gov. Specific plant performance indicators and inspection reports are updated at least quarterly.
