**RES Seminar, “Concrete Materials Research to Support Structural Performance of Nuclear Concrete Structures Affected by Alkali-Silica Reaction (ASR)”**

On January 31, 2017, RES conducted a Research Seminar on concrete materials research to support the evaluation of the structural performance of nuclear ASR affected concrete structures. This effort is being conducted for NRC at the National Institute of Standards and Technology (NIST). Dr. Steven Feldman, one of the researchers on the project, presented a review of concrete material composition, alkali-silica reaction (ASR) degradation in concrete, and specifics of the concrete materials studies on the RES project. The seminar helped NRC staff understand the importance of concrete materials performance and its impacts on the structural performance of nuclear concrete structures affected by ASR in licensing reviews for operating and license renewal periods. The seminar was well attended by NRC staff and management, including technical and legal staff from headquarters, and the regions via VTC.
