NRC to Hold Open House to Discuss 2018 Performance of Clinton Nuclear Power Plant

Nuclear Regulatory Commission staff will discuss the 2018 safety performance of the Clinton nuclear power station, operated by Exelon Generation Co., during the Clinton Area Chamber of Commerce and Tourism Bureau's Business Expo on March 27, in Clinton, Ill.

The business expo will be held from 4-7 p.m. at Clinton High School, 1200 Highway 54, in Clinton. NRC employees responsible for plant inspections, including the resident inspectors based full-time at the site, will be available to discuss the Clinton plant's performance.

Clinton operated safely during 2018. At the end of the year, all inspection findings and performance indicators were of very low safety significance. As a result, it remains under the NRC's normal level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

Inspections are performed by two NRC resident inspectors and inspection specialists from the Region III office located in Lisle, Ill.

The annual assessment letter for [Clinton](#), as well as the notice for the [event](#), are available on the [NRC website](#). Current performance information is also [available](#).
